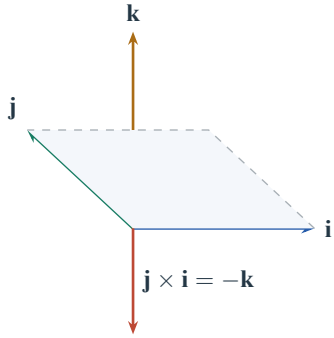
M1-03 先算内层叉乘，再确定外层结果



右手单位正交基的空间投影

$$\mathbf{A} = \mathbf{i},\ \mathbf{B} = \mathbf{j},\ \mathbf{C} = \mathbf{i}$$

$$\mathbf{B} \times \mathbf{C} = -\mathbf{k}$$
$$\mathbf{A} \times (\mathbf{B} \times \mathbf{C}) = \mathbf{j}$$

$$\mathbf{B}(\mathbf{A} \cdot \mathbf{C}) - \mathbf{C}(\mathbf{A} \cdot \mathbf{B})$$
$$= \mathbf{j}(1) - \mathbf{i}(0) = \mathbf{j}$$
