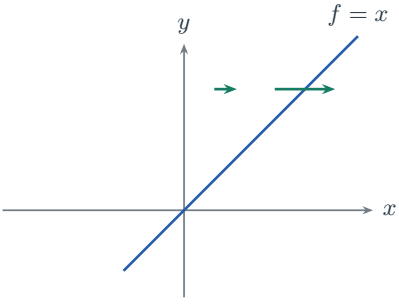
M1-10 变化的标量因子产生附加散度

$\mathbf{A} = \mathbf{e}_x$；箭长示意 $x > 0$ 的乘积场



$$\nabla \cdot \mathbf{A} = 0,\ \nabla f = \mathbf{e}_x$$

$$\nabla \cdot (f\mathbf{A}) = \partial_x x = 1$$

$$f\nabla \cdot \mathbf{A} + (\nabla f) \cdot \mathbf{A} = 0 + 1 = 1$$

$\mathbf{A}$ 均匀，但 $f\mathbf{A} = x\mathbf{e}_x$ 随位置变化
