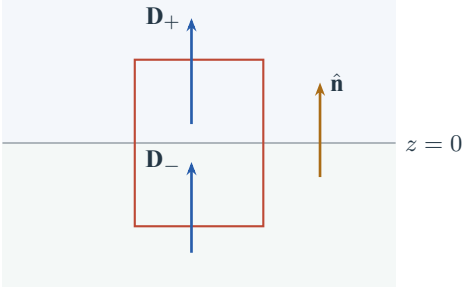
M1-33 薄柱跨越带自由面电荷的界面



图示 $D_0>0, \sigma_f>0$；通式允许任意符号

$\hat{\mathbf{n}} = \mathbf{e}_z$，$\mathbf{D}_- = D_0\mathbf{e}_z$

上、下盖的区域外法向相反：

$(D_+ - D_-)\Delta S = \sigma_f \Delta S$

$\mathbf{D}_+ = (D_0 + \sigma_f)\mathbf{e}_z$

侧面通量在薄柱极限下消失。
