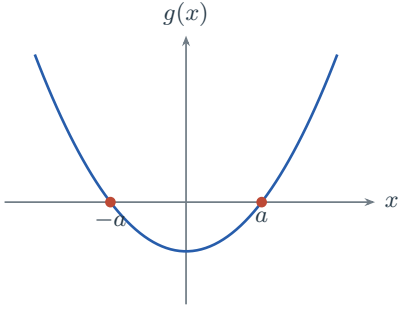
M1-67 两个单根分别贡献正权重



$g(x) = x^2 - a^2$，图按 x/a 缩放示意

$$g'(-a) = -2a,\ g'(a) = 2a$$

$$\delta(x^2 - a^2) = \frac{\delta(x-a) + \delta(x+a)}{2a}$$

$a > 0$，两根的权重都是 $1/(2a)$；
负斜率不会产生负的 δ 权重。
