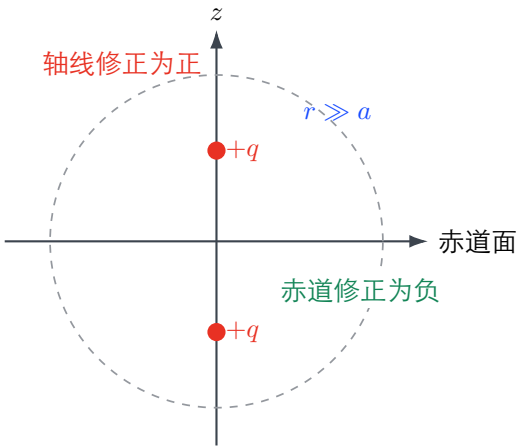
两个等量正电荷：单极场为主，四极修正在轴线与赤道异号



$$\varphi = \frac{2kq}{r} + \frac{2kqa^2}{r^3} P_2(\cos\theta) + O(r^{-5})$$

$$\theta = 0 : \quad \frac{\delta\varphi}{\varphi_0} = \frac{a^2}{r^2}$$

$$\theta = \frac{\pi}{2} : \quad \frac{\delta\varphi}{\varphi_0} = -\frac{a^2}{2r^2}$$
