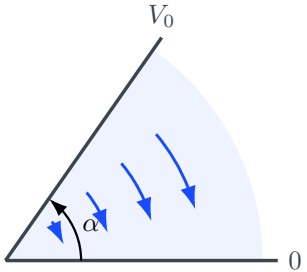
二维劈形电容场：电势沿角度线性变化，场强在顶点呈反比发散



$$\varphi(r,\theta) = \frac{V_0}{\alpha}\theta$$

$\mathsf{E} = -\dfrac{V_0}{\alpha r}\mathsf{e}_\theta$，故 $r \to 0$ 时场强按 $1/r$ 增大。

$w = z^{\pi/\alpha}$ 把劈形映到半平面。
