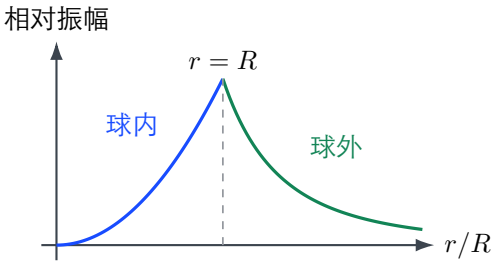
球面单一勒让德模态：向内按 r^{L} 衰减，向外按 $r^{-(L+1)}$ 衰减



曲线示例：$L = 2$

$$\varphi_{\text{内}} = V_L (r/R)^L P_L(\cos\theta)$$

$$\varphi_{\text{外}} = V_L (R/r)^{L+1} P_L(\cos\theta)$$

$r = R/2$：振幅 $2^{-L} V_L$；
$r = 2R$：振幅 $2^{-(L+1)} V_L$。
