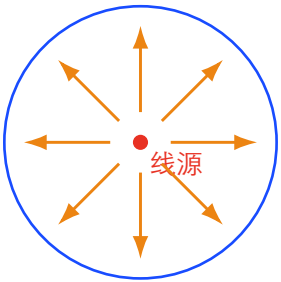
二维对数势：原点外调和，小圆通量揭示隐藏的线源

$\lambda_\ell > 0$ 时电场向外



高斯小圆

$$\rho \neq 0 : \quad \nabla^2(B \ln \rho) = 0$$

$$\oint \nabla\varphi \cdot \mathrm{n}\, dl = 2\pi B \Rightarrow \nabla^2\varphi = 2\pi B\, \delta^{(2)}(\boldsymbol{\rho})$$

$$B = -\frac{\lambda_\ell}{2\pi\varepsilon_0}$$
