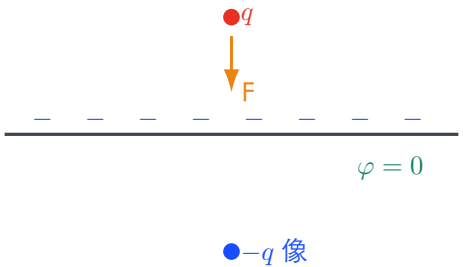
接地平面完整物理量：像电荷给场，真实系统能量只取相互作用的一半



$$\varphi = kq\left(\frac{1}{r_+}-\frac{1}{r_-}\right), \quad \sigma(s) = -\frac{qd}{2\pi(s^2+d^2)^{3/2}}$$

$$Q_{感} = -q, \qquad \mathsf{F} = -\frac{kq^2}{4d^2}\mathsf{e}_z$$

$$U = \frac{1}{2}q\varphi_{像}(\mathsf{r}_q) = -\frac{kq^2}{4d}$$
