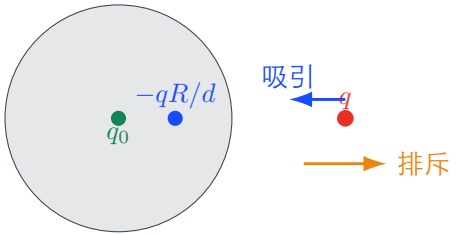
孤立带电球的力向分界：中央像同时承担给定净电荷与电势平移



$q_0 = Q_0 + qR/d$，反演像仍为 $-qR/d$。

$$F_r = \frac{kqq_0}{d^2} - \frac{kq^2Rd}{(d^2-R^2)^2}$$

$$Q_{0,\text{临}} = \frac{qR^3(2d^2-R^2)}{d(d^2-R^2)^2};$$

大于此值时合力向外。
