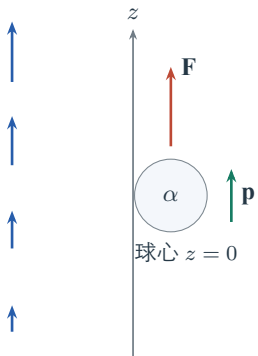
M3-029 线性梯度场中的介质小球



$\ell > 0,\ \alpha > 0$，外场沿 $+z$ 逐渐增强

$$E_0(z) = E_c(1 + z/\ell)$$

$$F_z = \frac{\alpha}{2}\frac{dE_0^2}{dz}$$

$$\mathbf{F}(0) = \frac{\alpha E_c^2}{\ell}\mathbf{e}_z$$
