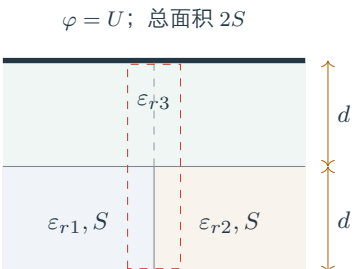
M3-018a 水平等势面假设导致的通量矛盾



模型一：假设水平界面等势

$$E_1 = E_2 = E_{\text{low}}$$

$$D_{1n} = \varepsilon_0 \varepsilon_{r1} E_{\text{low}}$$
$$D_{2n} = \varepsilon_0 \varepsilon_{r2} E_{\text{low}}$$

上层均匀 D_{3n} 无法同时匹配

$D_{1n} \neq D_{2n}$（非零加压）
