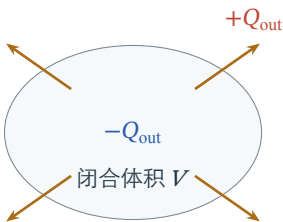
理论图 T17　从正电荷穿出到负束缚电荷留下

图示 **P** 的净通量为正



穿出正极化电荷，体内留下等量负束缚电荷；负号来自电荷守恒。

$$Q_{\text{out}} = \oiint_S \mathbf{P} \cdot d\mathbf{S}$$

$$Q_b = -Q_{\text{out}}$$

$$\oiint_S \mathbf{P} \cdot d\mathbf{S} = \iiint_V \nabla \cdot \mathbf{P}\, dV$$

$$\rho_b = -\nabla \cdot \mathbf{P}$$
