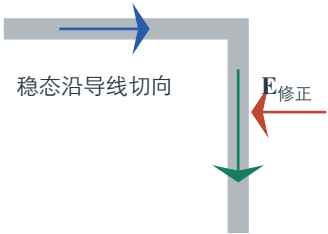
表面电荷调节法向场，使电流沿导线



局部修正场抵消原有法向分量；
场的整体方向由两端电势决定

绝缘侧壁：$\partial_t \sigma_s = \mathbf{J}_{\text{in}} \cdot \mathbf{n}$

稳态：$\mathbf{J} \cdot \mathbf{n} = 0$

$\mathbf{J} = \sigma \mathbf{E}$，总电场沿侧壁切向
