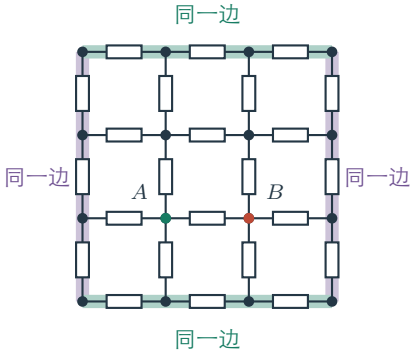
周期网络的基本域：同色对边逐点、逐边识别



示意 m=3；对应节点及对应边均为同一对象，只计一次

一般 $m \times m$ 周期网：$N = m^2,\ E = 2m^2$

对边识别后每点度数 4、各边等价

$$R_m/r \;=\; (m^2 - 1)/(2m^2)$$

$$m \;\to\; \infty \;:\quad R_{AB} \;\to\; r/2$$
