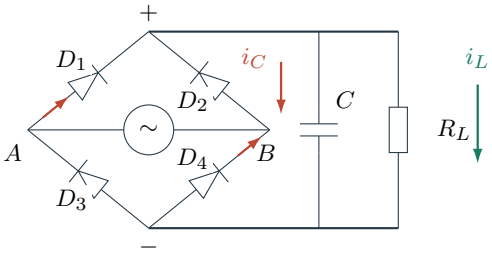
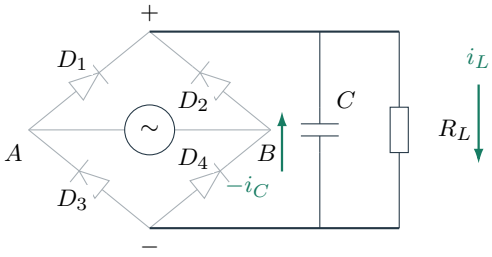
M6-069-P1　峰值附近充电与峰间电容供电

正半周峰值附近：充电



$u_2 > u_C + 2U_D$

两峰之间：桥截止，电容供电



$|u_2| < u_C + 2U_D$

二极管为恒压降 U_D 模型；负半周峰值换为 D_2, D_3 充电。电容放电期间负载电流仍向下。
